

RADICAL – Men’s Jewellery

What problem are we solving?

Men today lack **meaningful identity symbols**.

In India, the search for meaning and internal structure among men is accelerating: over 65–70% of urban Indian Gen-Z and millennial men say they prefer brands aligned with personal values, not just price or status (BCG / Deloitte India consumer studies). At the same time, **nearly 1 in 2 Indian men report stress linked to identity, career pressure, or lack of purpose**.

The global men’s jewellery market is growing, but it is dominated by **decorative, trend-driven, and status-led products** that fail to anchor discipline, purpose, or inner alignment.

As a result:

- Products are rotated, not retained
- Emotional attachment is low
- Repeat purchase is driven by novelty, not loyalty

This creates a gap between:

- **external expression** (what men wear), and
- **internal values** (discipline, purpose, self-mastery)

Men are spending more — but **anchoring less**.

What’s the pain, friction, or unmet need?

In a global consumer behavior study, **64% of male respondents** agreed:

“The things I buy reflect my identity and values.”

Source: Harvard Business Review / Accenture Life Reimagined Consumer Study

Jewellery fits *perfectly* into this category because:

- It's worn **daily**
- It's **visible to self**, even when not to others
- It carries **symbolic permanence**

In US, 78% of men think men's jewellery is now mainstream. But, only **17–24% of men buy jewellery for themselves annually**. **In India**, Over a quarter of men wear jewellery as a personal style statement, while many of them wear it primarily because it triggers emotions and adds sentimental value and meaning.

The pain is **lack of men's jewellery products with meaning, experience and identity alignment**, not lack of products.

Men want:

- symbols of strength **without noise**
- masculinity **without pretense**
- identity **without validation**

But the market offers either:

- fashion accessories with low emotional attachment and high churn, or
- loud, exaggerated masculinity that feels performative and shallow

There is **no serious, philosophy-led option** for men who value disciplined strength, clarity, and self-mastery.

What's your solution?

RADICAL builds surgical-grade **steel premium jewellery as identity wearables**, not decoration.

Each piece is designed as a **Weapon for Identity** — a physical reminder of discipline, purpose, and self-control. The jewellery is minimal, steel-driven, and rooted in Indian heritage and Warrior philosophy, designed to be worn **daily and long-term**. Throughout history warriors accepted steel as the final weapon material, RADICAL brings steel wearables for modern day warriors as a weapon for identity.

https://drive.google.com/file/d/1ZLPN9n_vuNqFfnjQ6DgVZTr9X0JkvKre/view?usp=sharing.

How is it different?

RADICAL is **story-driven, philosophy-led, not fashion-led**.

- Steel over precious metals (discipline and strength over indulgence, durable long term wear)
- Meaning over ornamentation

This approach increases:

- Emotional attachment
- **Timeless design over trends**, long-term wear cycles
- **Daily wear over rotation**, repeat significance-based purchases

RADICAL doesn't sell appearance — it sells **alignment with identity**.

Who is this for?

Men aged **22–45** who:

- value self-discipline and inner order
- reject loud masculinity and shallow trends
- want symbols that reflect who they are — and who they're becoming

Typically:

- Founders, professionals, creators, athletes, disciplined thinkers
- Urban, global, premium-oriented
- Willing to pay for meaning and product quality, not discounts

This is a **psychographic segment**, not a trend-following demographic.

How big is the problem?

Data-backed signals:

- **70%+ of urban Gen Z & millennial men** globally say they prefer brands that reflect personal values, not just function or style.
- Yet in men's jewellery, **<10% of brands lead with meaning or philosophy**
- Fashion-led jewellery sees **high churn**, with average wear cycles of **weeks to a few months**, not years

- Global jewellery market: ~\$350B+
- Men's jewellery segment: ~\$60–70B, growing at ~8–9% CAGR
- India's men's jewellery market (becoming 3rd largest in the world): ~\$2.5–3B, growing faster than women's jewellery in urban segments, still largely focused on gold/silver and fashion.

RADICAL targets a **high-margin, under-served niche** within this market: **identity-driven men's jewellery**, where emotional depth and long-term use matter more than trends.

While men spend significantly on gadgets and apparel, less than **10–15%** of daily-wear items are kept for emotional or symbolic reasons.

This is a **repeat, global problem**, amplified by rising interest in purpose, self-mastery, and meaning among modern men.

More importantly:

- Identity-led products have **higher LTV, lower churn, and lower discount dependency**
- Even a niche conservative capture (0.2%) of global demand supports a **1000 Cr brand** over time

Who are our competitors?

RADICAL sits at the intersection of **men's jewellery, lifestyle, and identity** — but no single competitor fully addresses this space.

1. Fashion-led men's jewellery brands

Examples: **Drip Project, Giva (men's line), The Men Thing, Black Mamba**, similar D2C labels

- Market focus: trend, drops, visual appeal
- Price range: ₹2,000–₹8,000
- Strength: fast adoption, social visibility
- **Gap:** low emotional stickiness, high rotation, weak identity anchoring

These brands compete on **style and relevance**, not meaning. Products are replaced, not kept.

2. Celebrity-backed lifestyle / jewellery brands

Examples: **MetaMan** by Sunil Shetty

- Market focus: grooming + jewellery + lifestyle
- Backed by celebrity trust and mass appeal
- Strength: reach and familiarity
- **Gap:** broad positioning dilutes depth; jewellery remains an accessory, not an identity object

These brands optimize for **scale and accessibility**, not long-term symbolic value.

Unisex brands like **Palmonas** by Shraddha Kapoor (Trend driven) and **Tayaani** by Karan Johar (Aspirational) are not exclusively targeting masculine identity.

3. Luxury jewellery brands (global & Indian)

Examples: **Tiffany & Co.**, **Cartier**, **Tanishq** (men's pieces)

- Market focus: status, craftsmanship, precious metals
- Price range: ₹50,000–₹5,00,000+
- Strength: aspiration and heritage
- **Gap:** not built for daily masculine wear; status signaling over personal discipline

Luxury brands sell **who you've become socially**, not who you're becoming internally.

4. Masculinity & self-improvement brands (non-jewellery)

Examples: fitness, coaching, grooming brands

- Market focus: habits, performance, improvement
- Strength: behavior change
- **Gap:** no physical, permanent identity symbol

They shape behavior — but don't anchor identity through objects.

Why none fully solve the problem

Across categories:

- ~90% of men's jewellery brands are **fashion-led**
- ~10% are **luxury/status-led**
- ~0% are **identity-led, philosophy-anchored, daily-wear symbols**

RADICAL occupies that **white space**.

In one line (landing-page / pitch headline)

RADICAL creates steel jewellery as weapons for identity — worn with discipline, built for men who choose alignment over noise.

One scrappy hack we'd use to get your first 1,000 customers

I'd build the first 1,000 customers through **identity-based distribution, not ads**.

Specifically:

- Identify **10–15 high-discipline communities** (founder circles, leadership cohorts, combat sports gyms, selective colleges, spiritual/meditative groups, etc.)
- Offer a **founder-only / cohort-only RADICAL edition** (same core piece, limited engraving or mark)
- Seed **50–100 pieces** with influential members in each group (not influencers, but *respected insiders*)
- Let the product spread through **quiet curiosity**, not promotion

RADICAL isn't something you "push" — it's something people ask about. This approach keeps CAC low and ensures the **right 1,000**, not just any 1,000.

If we had to live or die by one business metric, which would it be — and why?

Repeat wear rate / regular usage rate.

Not revenue.
Not followers.
Not conversion rate.

If customers **wear RADICAL daily**, it proves:

- the product has emotional stickiness
- the symbol is doing its job
- the brand has moved from accessory → identity

A product worn daily has:

- higher LTV
- organic word-of-mouth
- pricing power

If RADICAL isn't being worn regularly, it's failing its core promise.

If, after repeated iterations:

- customers like the product
- but don't form **emotional attachment**
- don't wear it consistently
- and don't assign meaning to it

—that's the signal.

RADICAL can survive slow growth.
It cannot survive **indifference**.

A pivot would preserve:

- the insight (men want identity anchors)
 - but make changes the **form factor**
-

If you had to cut one major feature to launch faster, what would you drop — and why?

I would drop broad marketplace distribution at launch.

Listing on large platforms early creates pressure to discount, chase reviews, and optimize for algorithms instead of meaning. For RADICAL, early adoption needs context and intent. I'd

launch through owned channels and tight communities first, validate attachment and pricing power, and only expand distribution once the brand stands for something clear.

Depth first.
Breadth later.

What's our 90-day execution plan?

Days 1–30: Foundation

- Finalize 2-3 **hero jewellery pieces**,
 - Same core geometry, philosophy, material (steel) and meaning.
 - Different **form factors** (pendant, rings, bracelets) not different stories.
- Lock manufacturing & unit economics (target: **65–70% gross margin**)
- Build brand assets (AI-led content, brand shoots and product visuals, landing page)
- Set up preorder / waitlist

Days 31–60: Market Validation

- Seed first **100–200 pieces** in high-discipline communities
- Capture feedback on wear frequency, emotional attachment
- Refine pricing, messaging, packaging
- Begin content-led audience building

Days 61–90: First Scale

- Deliver first paid orders
- Push toward **1,000 customers**
- Test institutional / group orders
- Prepare capital & mentor conversations for next phase

North Star metric: daily wear rate / repeat usage

What are the biggest risks and how will we you mitigate them?

1. Market risk: “Too niche”

Mitigation:

Start with a tight psychographic niche, expand later. Identity-led brands scale depth-first, not breadth-first.

2. Execution risk: Over-philosophizing

Mitigation:

Hero-product focus, strict SKU discipline, weekly shipping milestones.

3. Competitive risk: Trend brands copying the look

Mitigation:

Meaning, restraint, and philosophy can't be copied quickly. RADICAL's moat is **symbolism + consistency**, not aesthetics alone.

4. Capital risk: Early cash burn

Mitigation:

Lean AI-led ops, low inventory risk, preorder and institutional orders to fund growth.
